

CAPITA

ControlWorks[®] LIS

Location interoperability solution

Supporting multi-agency operational collaboration

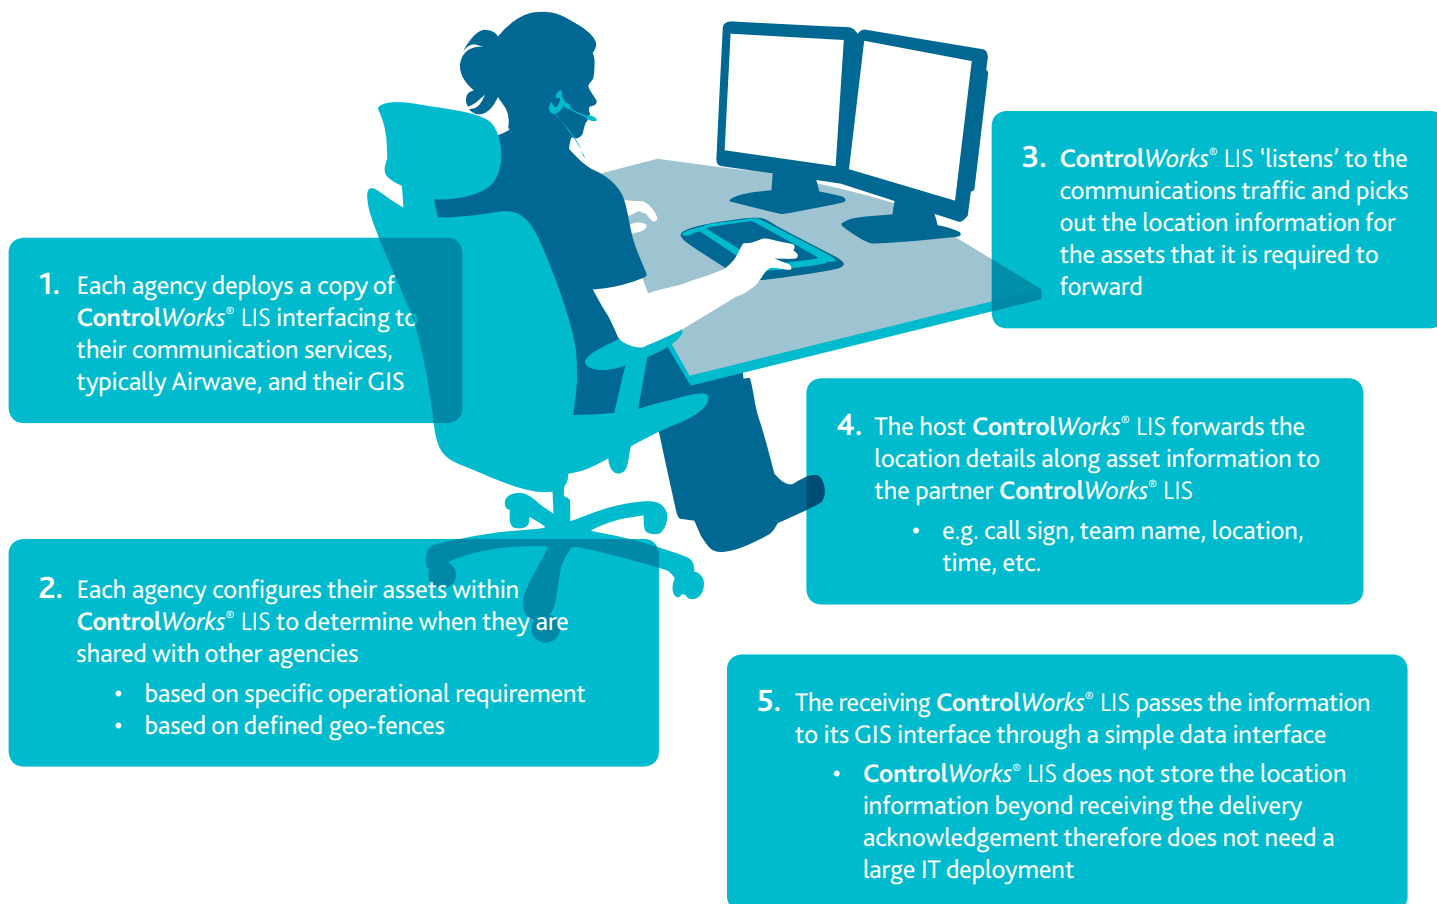

Planned joint operations, scheduled major events, unplanned major incidents; all characterised by a common theme – needing to know where all the resources are in order to maintain effective command and control.

Continued pressure on budget, demand on resources and lessons learnt from a variety of high profile incidents have raised the need for increased collaboration and interoperability both within individual services and between partner agencies.

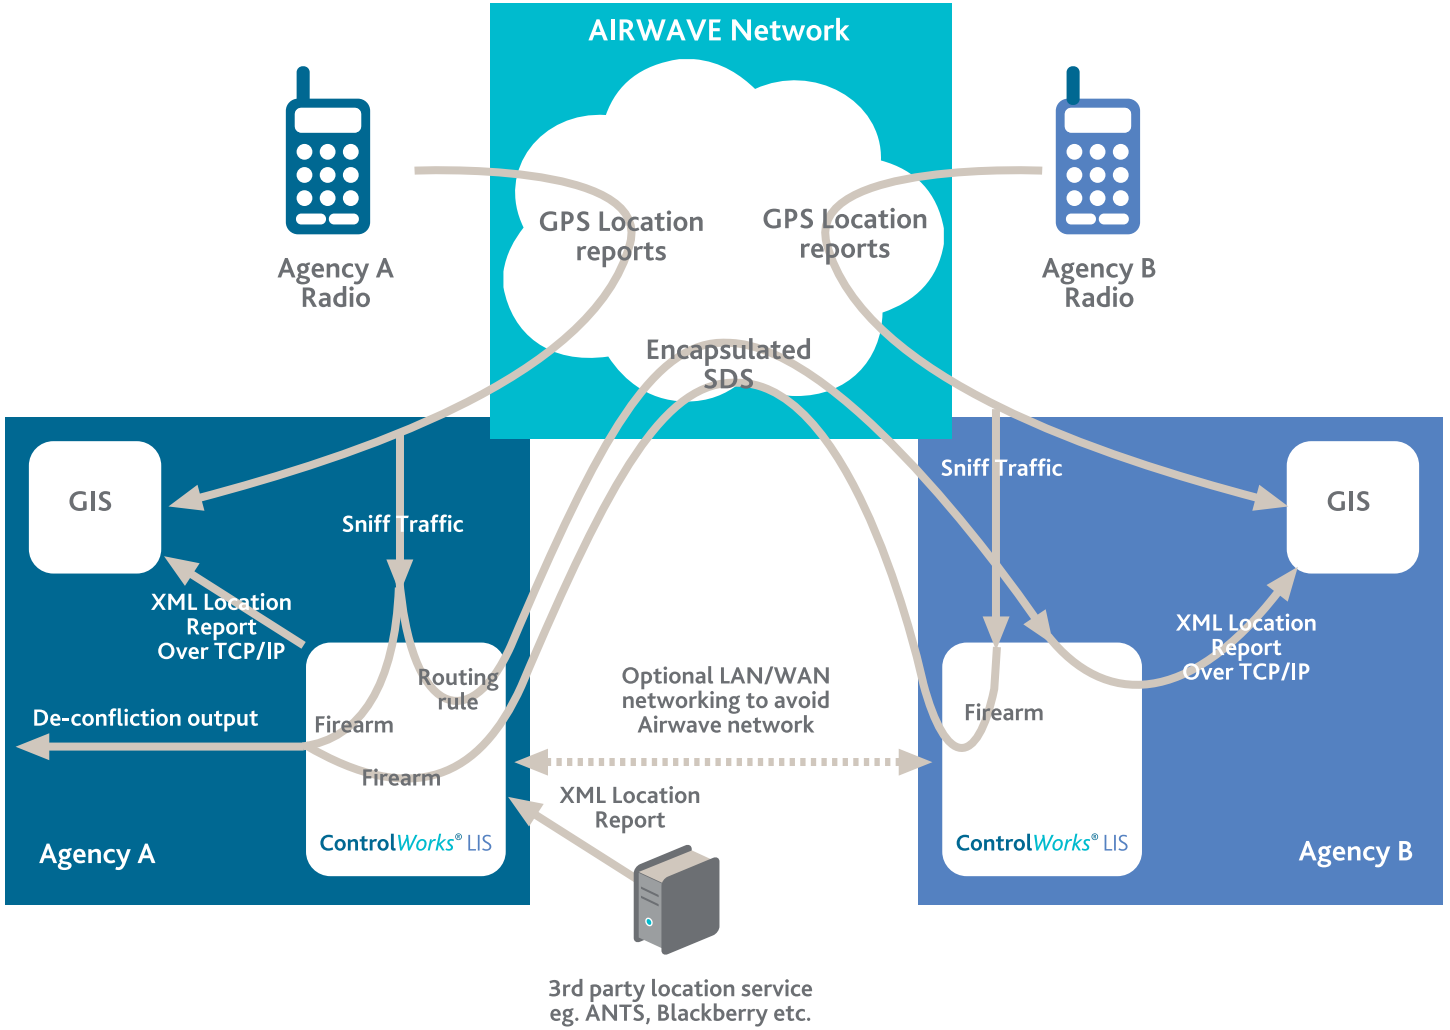

Developed for use by some of our key clients, Capita's Location Interoperability Solution, ControlWorks® LIS, can deliver a proven infrastructure that supports multi-agency operational collaboration.

How does ControlWorks® LIS work?

ControlWorks® LIS in action

Features and benefits

Simple, small-footprint IT deployment

Simple XML interfaces to third party systems

Web-based for simple deployment to users with User Access security controls

Independent of communications network and GIS

Includes **asset flags** to identify specialist training or operational capability

Additional functionality to provide remote radio management and programming

True multi-agency capability proven in specialist operations
